# CLEARPRO® EXTREME-5

**With Clearpro Extreme you can easily glue decorative wall tiles and wallcoverings that are difficult to bend.**

- Suitable for bonding decorative wall tiles and rigid, difficult to bend wallcoverings (maximum weight of 10kg/m<sup>2</sup>)
- Ready-to-use water-based adhesive
- High initial adhesive strength
- High final strength
- Coverage: 5kg = 10m<sup>2</sup>

#### **Instructions:**

- The parts to be glued must be dry, stable, clean and free of dust and grease.
- Use a glue spreader (A1) or a latex roller to apply the adhesive to one side only, either to the wall or to the back of the wall tiles. The open time is approx. 30 minutes. For other heavy wallcoverings (max 10kg/m<sup>2</sup>), both the wall and the material may be glued if necessary.
- After a short flash-off time (5 to 10 min.) bring both materials together and press.
- For unknown materials, an adhesion test should be performed first.
- Cleaning of adhesive residue and equipment: if the wallcovering allows it, adhesive residue that has not yet dried, can be removed with lukewarm water.
